Inboard Engine Cooling Systems. Modern cooling systems with heat-exchangers work with advanced coolants, but still need old-fashioned maintenance to stay efficient. In the old days, many marine engine cooling systems were of the "raw-water" variety, meaning simply that they relied on pumping whatever water the boat was floating in through the engine and pumping it out the exhaust system—salt water, polluted water, algae-infested water, whatever was available.

Marine Engines 4 Less encourages our customers who use their boats in a brackish or salt water environment to strongly consider installing a freshwater cooling system on their engines. Utilizing a closed cooling (freshwater cooling) system on your engine reduces corrosion that salt water creates on the engine.
