Continuing the exciting series of BNF Task Force Reports, Adverse Reactions to Foods covers in depth food allergy, food intolerance, nutrition and the immune system and autoimmune disease. Chaired by Professor Dame Barbara Clayton, task force members have provided cutting edge information, which is a must-have reference for a whole range of professionals including dietitians, nutritionists, health visitors, family practitioners, nursing practitioners and many other health professionals.

Completely revised and updated for its Fourth Edition, this Spiral(R) Manual is a quick-reference guide to the diagnosis and treatment of allergies and immunologic disorders in children and adults. Coverage includes allergic and immunologic disorders of each organ system; anaphylaxis; insect, drug, and food allergies; rheumatic diseases; immunohematology; transplantation immunology; primary immunodeficiency diseases; HIV disease and related opportunistic infections; immunologic diagnostic techniques; and immunization and immunoprophylaxis. The book is written in an easy-to-scan outline format, with numerous tables. Fourteen appendices provide rapid access to essential information, including normal laboratory values, allergy elimination diets, and manufacturers of allergenic extracts and environmental control products. A Brandon-Hill recommended title.

Handbook of Pediatric Nutrition, Third Edition, provides cutting edge research and resources on the most important pediatric issues and therapies, such as prenatal nutrition, weight management, vegetarian diets, diabetes guidelines, and transplant nutrition concerns. Commonly used by dietetic practitioners studying for their Pediatric Specialty exams, registered dietitians, dietetic technicians, nutritionists, pediatricians, nurses, and dietetic students, this book is considered the last word in pediatric nutrition.

A fine team of state-of-the-art researcher/clinicians who know their fields, have contributed to the advancement of knowledge, and are in a position to judge what is truly important have here pooled their thoughts in a series of chapters on the cutting edges of gastroenterology. Four attributes render this volume superior to other update-oriented publications. The first striking feature, which is immediately evident upon scanning the table of contents, is the imaginative choice of subjects, ranging from traveler's diarrhea and sexually transmitted GI infections through TPN and interventional endoscopy to geriatrics and iatrogenic disease. A second outstanding feature of this volume is its success in balancing basic pathophysiology with practical considerations of clinical management. This is achieved in the discussions of such diverse topics as acid-peptic diseases, infectious and other diarrheal syndromes, and hepatitis immunization. Throughout the book we are led smoothly from basic science principles to specific recommendations for diagnosis and therapy. This practical emphasis appears repeatedly and sometimes produces a delightful surprise, such as a chapter on radiology that is not technology-based but instead problem-oriented.
