Learn where to look for and how to identify and preserve your own collection of common and rare stone artifacts in this respected and ethical handbook.

The Native American tribes of what is now the southeastern United States left intriguing relics of their ancient cultural life. Arrowheads, spear points, stone tools, and other artifacts are found in newly plowed fields, on hillsides after a fresh rain, or in washed-out creek beds. These are tangible clues to the anthropology of the Paleo-Indians, and the highly developed Mississippian peoples. This indispensable guide to identifying and understanding such finds is for conscientious amateur archeologists who make their discoveries in surface terrain. Many are eager to understand the culture that produced the artifact, what kind of people created it, how it was made, how old it is, and what its purpose was. Here is a handbook that seeks identification through the clues of cultural history. In discussing materials used, the process of manufacture, and the relationship between the artifacts and the environments, it reveals ancient discoveries to be not merely interesting trinkets but by-products from the once vital societies in areas that are now Alabama, Arkansas, Georgia, Kentucky, Louisiana, Mississippi, the Carolinas, as well as in southeastern Texas, southern Missouri, southern Illinois, and southern Indiana. The text is documented by more than a hundred drawings in the actual size of the artifacts, as well as by a glossary of archeological terms and a helpful list of state and regional archeological societies.

Useful for academic and recreational archaeologists alike, this book identifies and describes over 200 projectile points and stone tools used by prehistoric Native American Indians in Texas. This third edition boasts twice as many illustrations—all drawn from actual specimens—and still includes charts, geographic distribution maps and reliable age-dating information. The authors also demonstrate how factors such as environment, locale and type of artifact combine to produce a portrait of these ancient cultures.
