Not only is it growing larger, but the edge of the universe is expanding at a faster and faster rate. Scientists think that the edge of the universe is expanding faster than the speed of light. Timeline of the Universe over 13.77 billion years. Scientists think it is still expanding at a very fast rate. Source: NASA.

Astronomy for Kids: The Universe

Universe, the whole cosmic system of matter and energy of which Earth, and therefore the human race, is a part. Humanity has traveled a long road since societies imagined Earth, the Sun, and the Moon as the main objects of creation, with the rest of the universe being formed almost as an afterthought. Today it is known that Earth is only a small ball of rock in a space of unimaginable vastness and that the birth of the solar system was probably only one event among many that occurred against ...

universe | Definition & Facts | Britannica

The result is a new atlas of the universe, according to the telescope's developer and operator, Australian science agency the CSIRO. The survey – the Rapid Askap Continuum Survey – has mapped...

Works in much the same way as Pocket Universe, but for Android users. As well as providing a detailed, annotated window into the night sky, the "Time Travel" option lets you view the sky as it ...

The 10 Best astronomy apps | The Independent | The Independent

Astronomy is the scientific study of all objects in space. The word comes to us from the ancient Greek term for "star law." Astrophysics, which is part of astronomy, goes a step further and applies the laws of physics to help us understand the origins of the universe and the objects in it. Both professional and amateur astronomers observe the universe and devise theories and applications to help understand the planets, stars, and galaxies.
