Over half of the world's population is afflicted with some form of chronic or degenerative illness. Heart disease, autoimmune disease, diabetes, neurological conditions, cancer, Lyme disease--the list goes on. The conventional, allopathic, treat-the-symptom-with-pharmaceutical-drugs model is rapidly falling out of favor as patients are searching for nontoxic, advanced prevention and healing modalities that actually work. Bioregulatory Medicine introduces a model that has proven effective for decades in other more forward-thinking developed countries, including Switzerland and Germany. Our bodies have many bioregulating systems, including the cardiovascular, digestive, neurological, respiratory, endocrine, and so on. Bioregulatory medicine is a comprehensive and holistic approach to health that advocates the use of natural healing methods to support and restore the body's intrinsic self-regulating and self-healing mechanisms, as opposed to simply treating symptoms with integrative therapies. Bioregulatory medicine is about discovering the root cause of disease and takes into account the entire person from a genetic, epigenetic, metabolic, energetic, and emotional point of view. So while patients may have the same disease or prognosis, the manifestation of illness is entirely bioindividual and must be treated and prevented on an individual level. Bioregulatory Medicine addresses the four pillars of health--drainage and detox, diet, mind-body medicine, and oral health--using a sophisticated synthesis of the very best natural medicine with modern advances in technology. In addition to identifying the cause of disease, bioregulatory medicine promotes disease prevention and early intervention of illness through noninvasive diagnostics and treatments, and incorporates the use of over 100 different non-toxic diagnostics and treatments from around the world. Forward-thinking patients and integrative practitioners will find Bioregulatory Medicine invaluable as they seek to deepen their understanding of the body's many regulating systems and innate ability to heal itself.

Más de la mitad de la población mundial padece algún tipo de enfermedad crónica o degenerativa para las que la medicina biorreguladora presenta un modelo de curación y prevención no tóxico y de demostrada eficacia. Esta medicina ofrece un enfoque integral y holístico de la salud, que aboga por el uso de métodos naturales para fortalecer y restaurar los mecanismos de autorregulación y autocuración con los que ya cuenta nuestro cuerpo. Aunando lo mejor de la medicina natural con los últimos avances tecnológicos, y enfocándose en la prevención y la intervención temprana mediante diagnósticos y tratamientos no invasivos, esta innovadora modalidad busca la causa raíz de la enfermedad y tiene en cuenta a la persona en su totalidad, desde un punto de vista genético, epigenético y metabólico, pero también, y especialmente, energético y emocional. La manifestación de una misma enfermedad siempre será completamente bioindividual para cada paciente, y así debe tratarse y prevenirse. Los pacientes con visión de futuro y los profesionales integradores, descubrirán que la medicina

bioreguladora es clave a la hora de comprender la capacidad innata del organismo para curarse a sí mismo.

Written by international experts in the field, this book provides a comprehensive introduction to the fundamental principles and clinical practice of bioregulatory medicine. It opens with an overview of core concepts in homotoxicology, including the human body's defense and regulation systems, followed by a chapter on the development and evolution of illness. The authors cover the different preparation groups and discuss in detail the basic principles of antihomotoxic therapy: drainage and detoxification, immunomodulation, and cell and organ support. The final chapter focuses on the practical aspects of bioregulatory treatment, including the selection and availability of medications, indications, contraindications, and therapeutic strategies for a variety of common diseases. Highlights: Insights from renowned experts in homotoxicology Poster-size version of the Disease Evolution Table (DET), a key tool in daily practice Plant-, mineral-, and organ-based medications--how they work Practical information on various treatment methods, such as ointment dressings, injection therapies, and biopuncture 80 high-quality illustrations and diagrams that demonstrate key concepts Introduction to Bioregulatory Medicine is a valuable textbook for medical students, medical doctors, naturopathic physicians, homeopaths, and other health care professionals who wish to expand their knowledge in this field.

A renowned physician from the Paracelsus Clinic in the Swiss Alps outlines a health program based on his cleansing diet and rejuvenation system that is designed to help regulate pH balances, strengthen the immune system, promote weight loss, and more, in a reference that is complemented by recipes. Reprint.

The Optimal Terrain Ten Protocol to Reboot Cellular Health Since the beginning of the twentieth century, cancer rates have increased exponentially--now affecting almost 50 percent of the American population. Conventional treatment continues to rely on chemotherapy, surgery, and radiation to attack cancer cells. Yet research has repeatedly shown that 95 percent of cancer cases are directly linked to diet and lifestyle. The Metabolic Approach to Cancer is the book we have been waiting for--it offers an innovative, metabolic-focused nutrition protocol that actually works. Naturopathic, integrative oncologist and cancer survivor Dr. Nasha Winters and nutrition therapist Jess Higgins Kelley have identified the ten key elements of a person's "terrain" (think of it as a topographical map of our body) that are crucial to preventing and managing cancer. Each of the terrain ten elements--including epigenetics, the microbiome, the immune system, toxin exposures, and blood sugar balance--is illuminated as it relates to the cancer process, then given a heavily researched and tested, non-toxic and metabolic, focused nutrition prescription. The metabolic theory of cancer--that cancer is fueled by high carbohydrate diets, not "bad" genetics--was introduced by Nobel Prize-laureate and scientist Otto Warburg in 1931. It has been largely disregarded by conventional oncology ever since. But this theory is resurging as a result of research showing incredible clinical outcomes when cancer cells are deprived of their primary fuel source (glucose). The ketogenic diet--which relies on the body's production of ketones as fuel--is the centerpiece of The Metabolic Approach to Cancer. Further, Winters and Kelley explain how to harness the anticancer potential of phytonutrients abundant in low-glycemic plant and animal foods to address the 10 hallmarks of cancer--an approach Western medicine does with drug based therapies. Their optimized, genetically-tuned diet shuns grains, legumes, sugar, genetically modified foods, pesticides, and synthetic ingredients while emphasizing whole, wild, local, organic, fermented, heirloom, and low-glycemic foods and herbs. Other components of their approach include harm-reductive herbal therapies like mistletoe (considered the original immunotherapy and common in European cancer care centers) and cannabinoids (which shrink tumors and increase quality of life, yet are illegal in more than half of the United States). Through addressing the ten root causes of cancer and approaching the disease from a nutrition-focused standpoint, we can slow cancer's endemic spread and live optimized lives.

"Enraged, Energized, Exultant. You won't know how to feel after reading Stephen Harrod Buhner's The Lost Language of Plants. This is a devastating expose about how we are polluting our environment with the pharmaceuticals that Western medicine has developed to heal us. We are ingesting Prozac, Premarin, and antibiotics whether we want to or not." "Yet, as we foul air and water with toxic residues, we overlook the power of the planet's natural healers, stabilizers, and chemists - plants. Buhner sees plants as fully sentient beings, adjusting and fine-tuning to the environment just as they have done for the past 500 million years. Until recently, humans shared the language of plants, but increasingly we have lost our ability to communicate with the natural world. Buhner shows us a path back to our shamanic roots."--BOOK JACKET.

Today's beekeepers face unprecedented challenges, a fact that is now front-page news with the spread of "colony collapse disorder." Newly introduced pests like varroa and tracheal mites have made chemical treatment of hives standard practice, but pest resistance is building, which in turn creates demand for new and even more toxic chemicals. In fact, there is evidence that chemical treatments are making matters worse. It's time for a new approach. Now revised and updated with new resources and including full-color photos throughout, Natural Beekeeping offers all the latest information in a book that has already proven invaluable for organic beekeepers. The new edition offers the same holistic, sensible alternative to conventional chemical practices with a program of natural hive management, but offers new sections on a wide range of subjects, including: The basics of bee biology and anatomy Urban beekeeping Identifying and working with queens Parasitic mite control Hive diseases Also, a completely new chapter on marketing provides valuable advice for anyone who intends to sell a wide range of hive products. Ross Conrad brings together the best "do no harm" strategies for keeping honeybees healthy and productive with nontoxic methods of controlling mites; eliminating American foulbrood disease without the use of antibiotics; selective breeding for naturally resistant bees; and many other detailed management techniques, which are covered in a thoughtful, matter-of-fact way. Whether you are a novice looking to get started with bees, an experienced apiculturist looking for ideas to develop an integrated pest-management approach, or someone who wants to sell honey at a premium price, this is the book you've been waiting for.

Life extends beyond the boundaries of our skin. We are a whirling field of energies, which modern instruments can easily detect and measure. This opens the door to many exciting and revolutionary ways to diagnose and treat illness, including the use of interactive electronics.
