aquifers) IPC consists of twelve chapters of text and twelve companion student activity books. This course introduces students to the people, places and principles of physics and chemistry. It is written by internationally respected scientist/author, John Hudson Tiner, who applies the vignette approach which effectively draws readers into the text and holds attention. The author and editors have deliberately avoided complex mathematical equations in order to entice students into high school level science. Focus is on the people who contributed to development of the Periodic Table of the Elements. Students learn to read and apply the Table while gaining insight into basic chemistry and physics. This is one of our most popular courses among high school

Students, especially those who have a history of under-performance in science courses due to poor mathematical and reading comprehension skills. The course is designed for two high school transcript credits. Teachers may require students to complete all twelve chapters for two transcript credits or may select only six chapters to be completed for one transcript credit for Physical Science, Physics, or Chemistry. Compliance with state and local academic essential elements should be considered when specific chapters are selected by teachers. As applicable to local policies, transcript credit may be assigned as follows when students complete all 12 chapters: Physical Science for one credit and Chemistry for one credit, or Integrated Physics and Chemistry for

Analytical Chemistry focuses on more in-depth coverage and information about Quantitative Analysis (aka Analytical Chemistry) and related fields. The content builds upon previous editions with more enhanced content that deals with principles and techniques of quantitative analysis with more examples of analytical techniques drawn from areas such as clinical chemistry, life sciences, air and water pollution, and industrial analyses.

and environmental factors affect the soil chemical concepts being discussed makes the text relevant to today's soil science curriculums. This revised reprint provides edits to formulas, numbers, and text. - Use of computer modeling for water and soil chemistry provides students with the models used by practicing environmental chemists. - Examples and complex problems with worked solutions included throughout the text. - Examples based on real data provide exposure to the real problems and data students will face in their careers.

"If you have ever been confused by traditional acid-base teaching and want a deeper and practical understanding of the subject, this is the book for you! You will be rewarded." -- Acid-Base balance is pivotal in medicine and the biosciences. Almost 30 years ago, Peter A Stewart introduced his approach to acid-base which has now become the method of choice. This textbook incorporates his original publication, complemented by over 20 new chapters. These discuss recent developments in acid-base medicine using the same clear and concise style. There is extensive focus on

Practical clinical Application of the Stewart approach. Highly recommended for everyone that seeks to understand, apply or practice acid-base medicine and physiology. This includes consultants, fellows and residents in critical care medicine, anesthesiology, internal medicine, emergency medicine and surgery; physicians in other branches of medicine; physiologists; veterinarians; bioscientists; and medical students.

General, Organic and Biological Chemistry, 4th Edition has been written for students preparing for careers in health-related fields such as nursing, dental hygiene, nutrition, medical technology and occupational therapy. It is also suited for students majoring in other fields where it is important to have an understanding of

the basics of chemistry. An integrated approach is employed in which related general chemistry, organic chemistry, and biochemistry topics are presented in adjacent chapters. This approach helps students see the strong connections that exist between these three branches of chemistry, and allows instructors to discuss these, interrelationships while the material is still fresh in students' minds.
