Thomas and Ellis provide detailed, straightforward management practices to improve construction site activity and reduce losses in labor productivity from the most common site challenges.

Thomas and Ellis provide detailed, straightforward management practices to improve construction site activity and reduce losses in labor productivity from the most common site challenges.

Based on years of research and practical knowledge, Construction Labor Productivity Management and Methods Improvement provides the tools and information for any contractor to effectively manage labor and improve worker productivity. In a labor-intensive industry such as construction, even small improvements in productivity can significantly improve company profits. This book provides a guide to creating a system of productivity, allowing productivity to be measured, quantified and improved.

An important starting point in considering the technical aspects of planning and site management is the wide choice of possible technologies, which is one of the special features of the construction industry.; This handbook illustrates the management of construction projects with worked examples and test-planning skills with exercises in management practice.

Trevor Holroyd maintains that a substantial part of an engineer's training relates solely to the academic and the result is that engineers may be greatly disadvantaged in the commercial world. In his book, *Site management for engineers*, he presents, in concise and clear terms, the practices which an engineer must understand to become competitive commercially. The book covers good site practice and management techniques, programmes, tenders, construction methods, all types of resource procurement, health and safety, planing systems and people skills. It draws on examples from the author's extensive experience of site supervision and provides engineers with a practical working guide.

Organising and administering a construction site so that the right resources get to the right place in a timely fashion demands strong leadership and a rigorous process. Good logistical operations are essential to profitability, and this book is the essential, muddy boots guide to efficient site management. Written by experienced educator-practitioners from the world-leading Building Construction Management programme at Purdue University, this volume is the ultimate guide to the knowledge, skills, and abilities that need to be mastered by project superintendents. Observations about leadership imperatives and techniques are included. Organisationally, the book follows site-related activities from bidding to project closeout. Beyond outlining broad project managerial practices, the authors drill into operational issues such as temporary soils and drainage structures, common equipment, and logistics. The content is primarily geared for the manager of a domestic or small commercial building construction project, but includes some reference to public and international work, where techniques, practices, and decision making can be substantially different. The book is structured into five sections and fifteen chapters. This facilitates ready adaptation either to industry training seminars or to university courses: Section I. The Project and Site Pre-Planning: The Construction Project and Site Environment (Randy Rapp); Due Diligence (Robert Cox); Site Organization and Layout (James O'Connor). Section II. The Site and Field Engineering Issues: Building Layout (Douglas Keith); Soil and Drainage Issues (Yi Jiang and Randy Rapp). Section III. Site Logistics: Site Logistical Procedures and Administration (Daphene Koch); Earthmoving (Douglas Keith); Material Handling Equipment (Bryan Hubbard). Section IV. Leadership and Control: Leadership and Communication (Bradley Benhart); Health, Safety, Environment (HSE), and Security (Jeffrey Lew); Project Scheduling (James Jenkins); Project Site Controls (Joseph Orczyk); Inspection and QA/QC (James Jenkins). Section V. Planning for Completion: Site-Related Contract Claims (Joseph Orczyk); Project Closeout (Randy Rapp).
