In cities around the world people use a variety of public spaces to relax, to protest, to buy and sell, to experiment and to celebrate. *Loose Space* explores the many ways that urban residents, with creativity and determination, appropriate public space to meet their own needs and desires. Familiar or unexpected, spontaneous or planned, momentary or long-lasting, the activities that make urban space loose continue to give cities life and vitality. The book examines physical spaces and how people use them. Contributors discuss a wide range of recreational, commercial and political activities; some are conventional, others are more experimental. Some of the activities occur alongside the intended uses of planned public spaces, such as sidewalks and plazas; other activities replace former uses, as in abandoned warehouses and industrial sites. The thirteen case studies, international in scope, demonstrate the continuing richness of urban public life that is created and sustained by urbanites themselves. Presents a fresh way of looking at urban public space, focusing on its positive uses and aspects. Comprises 13 detailed, well-illustrated case studies based on sustained observation and research by social scientists, architects and urban designers. Looks at a range of activities, both everyday occurrences and more unusual uses, in a variety of public spaces -- planned, leftover and abandoned. Explores the spatial and the behavioral; considers

the wider historical and social context. Addresses issues of urban research, architecture, urban design and planning. Takes a broad international perspective with cases from New York, London, Berlin, Amsterdam, Rome, Guadalajara, Athens, Tel Aviv, Melbourne, Bangkok, Kandy, Buffalo, and the North of England.

The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals (Einstein), institutions and disciplines (Mathematics), general themes (Romantic Science) and central concepts (Paradigm and Fact). The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn.

This book delves into the ethical dimension of urban life: how should one live in the city? What constitutes a 'good' life under urban condition? Whose gets to live a 'good' life, and whose ideas of morality, propriety and 'good' prevail? What is the connection between the 'good' and the 'just' in urban life? Rather than philosophizing the 'good' and proper life in cities, the book considers what happens when urban conflicts and urban futures are carried out as conflicts over the good and proper life in cities. It offers an understanding of how ethical discourses, ideals and values are harmonized with material interests of different groups, taking

up cases studies about environmental protection, co-housing schemes, political protest, heritage preservation, participatory planning, collaborative art production, and other topics from different eras and parts of the globe. This book offers multidisciplinary insights, ethnographic research and conceptual tools and resources to explore and better understand such conflicts. It questions the ways in which urban ethics draw on tacit moral economies of urban life and the ways in which such moral economies become explicit, political and programmatic. Establishing a new, scientifically validated foundation for current psychotherapeutic practice. The twenty-first-century psychotherapist can no longer be constrained by specific schools of practice or limited reservoirs of knowledge. But this new "era of information" needs to be integrated and made manageable for every practitioner. This book helps therapists learn more about this new knowledge and how to apply it effectively. In this single-volume learning resource, Richard Hill and Matthew Dahlitz introduce practitioners to the many elements that create our psychology. From basic neuroscience to body-brain systems and genetic processes, therapists will discover how to become more "response-able" to their clients. Topics include neurobiology, genetics, key therapeutic practices to treat anxiety, depression, trauma and other disorders; memory; mirror neurons and empathy, and more. All are presented with case studies and treatment applications.
