In computing, just-in-time compilation is a way of executing computer code that involves compilation during execution of a program – at run time – rather than before execution. Most often, this consists of source code or more commonly bytecode translation to machine code, which is then executed directly. A system implementing a JIT compiler typically continuously analyses the code being executed and identifies parts of the code where the speedup gained from compilation or recompilation ...

Since production for just in time delivery happens only for specific customer orders, just-in-time services are somewhat backward from normal supply chain fulfillment in the way that goods are pulled through the supply chain versus pushed through. So, the production process only begins when a customer placed an order, and inventory stock is only delivered as-needed.

The phrase 'just-in-time' is well-recognized across the manufacturing industry, whether its just-in-time inventory - receiving goods only as they are needed, or more broad just-in-time manufacturing strategies like the 'lot size one', where items are manufactured to order, meeting demand without surplus. The common goal of these models is to gain operational efficiencies by more stringently aligning supply and demand, creating more intuitive, dynamic, and flexible production systems ...

These issues led to the development of a new system for managing inventory called Just-In-Time (JIT) inventory. JIT inventory began in the 1970's during the boom of high-quality, innovative, Japanese manufacturing coming from Sony, Toyota, and others. However, it didn't become popular in the United States until the 1980's.

This book reports the elements required for implementing Just in Time (JIT) technique in companies. The main reasons for low implementation processes and the main benefits from the successful implementation of them are highlighted in this book. Structural equation models are presented to help identify the essential elements in JIT.

The enduring repercussions of the Asian financial crisis in 1997, the worsening global economy following the burst of the dotcom bubbles in 2001, the financial tsunami in 2008, and the incessant rise in customer demand for better services have all contributed to shrinking profit margins for businesses around the world. To cope with these challenges, firms are discovering logistics as a competitive weapon when looking for ways to strengthen and preserve their market positions. One successful solution has been the adoption of Just-in-Time manufacturing systems, which involve many functional areas of a firm such as manufacturing, engineering, marketing, and purchasing, among others. Just-in-Time Logistics extends the JIT concept in manufacturing to business logistics, an area that has been observed to account for more than 30 per cent of sales revenue for some firms. It gives you an overview and an introduction of JIT logistics, and provides managerial insights on how to achieve improved logistics performance in terms of cost and service enhancements. A discussion of the quality, implementation, and performance measurement issues related to the application of JIT in business logistics is also presented.

The book is a collection of chapters written by the participants of a free open course on the Canvas Open Network entitled Humanizing Online Instruction. In the course, a variety of methods for increasing presence in online courses were shared in this multi-institutional, international, online professional learning opportunity.

developed in a region that was "wired" earlier and more widely than many other parts of the Americas. Haiti, Cuba, and Jamaica acquired radio and broadcasting in the early stages of the global expansion of telecommunications technologies. Imperial histories helped forge these material connections through which the United States, Great Britain, and the islands created a virtual laboratory for experiments in audiopolitics and listening practices. As radio became an established medium worldwide, it burgeoned in the Caribbean because the region was a hub for intense foreign and domestic commercial and military activities. Attending to everyday life, infrastructure, and sounded histories during the waxing of an American empire and the waning of British influence in the Caribbean, Bronfman does not allow the notion of empire to stand solely for domination. By the time of the Cold War, broadcasting had become a ubiquitous phenomenon that rendered sound and voice central to political mobilization in the Caribbean nations throwing off what remained of their imperial tethers.

Masters Theses in the Pure and Applied Sciences was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS) \* at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and dissemination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination. Hence, starting with Volume 18, Masters Theses in the Pure and Applied

Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 32 (thesis year 1987) a total of 12,483 theses titles from 22 Canadian and 176 United States universities. We are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work. While Volume 32 reports theses submitted in 1987, on occasion, certain universities do report theses submitted in previous years but not reported at the time.

Drawing on a historical and political economy analysis, this book provides insight on how, under neoliberal hegemony, the internet was transformed from an emancipatory project for humanity to the final frontier of unrestrained capitalism.
