focusing on contemporary topics within the field of cardiothoracic surgery. Each Lecture, together with its accompanying review paper, will allow the reader to place the findings of the scientific research into a practical, real world context, by integrating what a leading expert would recommend based on his/her rich clinical experience.

~~Keynote Lecture Series—Annals of Cardiothoracic Surgery~~

- Vertical expansion produces the greatest change in capacity & is brought about by the contraction of the diaphragm
- When the diaphragm contracts it drops downward increasing the vertical dimension of the thoracic cavity

Pathology A&P II Lecture NURSING. Preview text. HUBS 192
Module 1: Cardiovascular System
Lecture 1: Design of the Circulation and Haemodynamics
The Need to Circular Blood
Diffusion versus advection (advection is like convection but more general – carrying a substance in a moving medium)
Diffusion of oxygen
Need an alternative pathway to overcome the limitations of diffusion => blood vessels
Large conduit vessels deliver blood to the organs (arteries) and return blood to the heart ...
