Sound is a mechanical, longitudinal wave. As a mechanical wave, sound requires a medium . Sound cannot propagate through a vacuum. There is no sound in outer space. As a longitudinal wave, sound is a rapid variation in pressure that propagates. Regions of above normal pressure (regions under compression) are called compressions or condensations. Regions of below normal pressure (regions under tension) are called rarefactions or dilations.

2. The nature of sound - Very Short Introductions

The nature of sound. Understanding the nature of sound, its properties and physics, is of prime importance for composers today. Chapter 3 examines both the physical and psychoacoustical properties of sound materials: time domain waveforms, the time-frequency domain, sound magnitude, zones of frequency and intensity, timescales of sound, the speed of sound, the size and shape of sounds, the perception of the rate of sound events, and timbre.

Nature of sound - Oxford Scholarship

Abstract. If we were to treat every sound in the world separately then this book would be a little on the large side. There are millions of sounds out there that human beings can perceive and differentiate between.

The three elements of sound | SpringerLink

The sound waves are gathered and go through the ear canal to the eardrum. The sound vibrates the eardrum passing the energy to the hammer, anvil, and stirrup. The bones amplify the sound waves. The stirrup passes the sound to the cochlea. The hair cells vibrate and send impulses to the auditory nerve, and the auditory nerve sends it to the brain.
