You may have complex needs that aren't handled automatically by the Alpine Setup Scripts. In those cases, you'll need to prepare your disks manually. It is possible to have one or more of RAID, encryption, and/or LVM on your / (root) volume. However, the Alpine init script only knows how to handle them when they're layered in that order, and your initram and extlinux.conf file in the /boot ...

### ~~Setting up disks manually - Alpine Linux~~

This doesn't include hidden files. `--hidden` Search hidden files. This option obeys ignored files. For the list of supported filetypes run `ag --list-file-types`. The only thing it seems to lack is being able to specify a filetype with an extension, in which case you need to fall back on `grep` with `--include`.
