The driver of a car controls the engine's power to achieve vehicle speed. The operator of an off-highway diesel engine just controls engine speed, and power is developed automatically. This behaviour is similar to the cruise control in a car. Diesel engines are described as lean burn engines: they require more air than fuel.

Chaz is the youngest recruit the Academy has ever seen. Godlike reflexes and hawk eyes make him a natural gunner assigned to fly the futuristic ship with technology so advanced it's still classified. But it takes a two-man crew and Chaz, the lone wolf, must have a partner. On his first day he meets Ferron, the most dangerous man at the Academy. The ice blue eyes and scarred face of the older cadet aren't enough to scare Chaz. Nor are the rumors that Ferron killed his last partner. But when he finds out they are to be a team, his anxiety starts to mount. Tension climbs to a breaking point when Ferron informs him that in order to fly the Needle he and Chaz must have their bodies pressed together in a dance of sensual intimacy that makes the sexually straight Chaz angry and uncomfortable. Ferron must master Chaz completely and break down his physical and emotional boundaries. The only thing that will keep them alive is their partnership-any space between them means certain death.

The second edition of *Flight Stability and Automatic Control* presents an organized introduction to the useful and relevant topics necessary for a flight stability and controls course. Not only is this text presented at the appropriate mathematical level, it also features standard terminology and nomenclature, along with expanded coverage of classical control theory, autopilot designs, and modern control theory. Through the use of extensive examples, problems, and historical notes, author Robert Nelson develops a concise and vital text for aircraft flight stability and control or flight dynamics courses.
