~~Plantlife :: Discover Wild Plants~~

In addition to becoming familiar with the structure of plants, the reader discovers how seeds grow, how insects help, and how plants defend themselves. Through this book ch Third volume in the "Eyes and No Eyes" series, introduces children to the wonders of plant life through examination of a variety of plants, including the cabbage, the turnip, the cucumber, and the rose.

~~Plant Life in Field and Garden by Arabella B. Buckley~~

Wild flowers, plants and fungi are the life support for all our wildlife and their colour and character light up our landscapes. But without our help, this priceless natural heritage is in danger of being lost.

The root microbiota was found to be highly dynamic during the vegetative phase of plant growth and then stabilized compositionally for the remainder of the life cycle. Bacterial and archaeal taxa conserved between field sites were defined as predictive features of rice plant age by modeling using a random forest approach.

A field guide to the plants found on the average school playing field - useful when student are doing sampling, as it has a photo of the plant.

~~Playing Field Plant Guide | Teaching Resources~~

Slugs are widespread animals which can cause problems in the garden, eating holes in leaves, stems, flowers, tubers and bulbs. They can cause damage throughout the year on a wide range of plants, but seedlings and new growth on herbaceous plants in spring are most at risk.

~~Slugs / RHS Gardening~~

Plants are able to reproduce in two different ways - sexual reproduction and asexual reproduction. Sexual reproduction involves pollen from one flower fertilising the egg of another to produce a...

ated bacterial and archaeal communities throughout the plant life cycle in field-grown rice over multiple seasons and locations. Our results indicate that root microbiota composition varies with both chronological age and the developmental stage of the plants.

~~Compositional shifts in root-associated bacterial and ...~~

One such plant is the dandelion, which has feathery parachutes attached to its seeds, so they can drift through the air. Water: many plants that grow in or near water produce light seeds that fall on the water, float and get carried away. Exploding pods: there are some plants that are able to spread their seeds all by themselves! They have exploding pods that burst open when ripe, flinging the seeds into the air!

Although our goal is to make plant identification easy and accessible to anyone with a smartphone, we also know that field guides are still the best way to learn to identify plants around you. Ultra-specific books like Trees of Michigan are exactly what I look for when buying a new field guide – but there's simply no room to list all of the excellent local guides here.
