When tuning the target fuel map, rotary engines like to run rich compared to a piston engine. A good starting point for a rotary engine fuel map at idle is between 13.5:1 and 14.1:1, low 11's at atmospheric pressure and when under boost, quickly richening up to a flat 10.5:1 through redline. You will notice that a rotary engine will make similar power at an AFR of 10:1 as it would at 13:1.

Tuning the RX8 rotary engine is considered difficult by some but there are a few options that can transform the RX8 performance. Bear in mind that these come from the factory in a pretty highly tuned state, so end user improvements are smaller than they would be on a run of the mill production car where little attention has been made to tuning them
