Viruses are another type of tiny microorganism, although they're even smaller than bacteria. Like bacteria, they're very diverse and have a variety of shapes and features. Viruses are parasitic.

~~Bacterial vs. Viral Infections: What's the Difference?~~

Viruses are not living organisms, bacteria are. Viruses only grow and reproduce inside of the host cells they infect. When found outside of these living cells, viruses are dormant. Their "life" therefore requires the hijacking of the biochemical activities of a living cell. Bacteria, on the other hand, are living organisms that consist of single cell that can generate energy, make its own food, move, and reproduce (typically by binary fission). This allows bacteria to live in many places ...
